Serhii Maksymchuk

serg.maximchuk@gmail.com

Senior Software Engineer / Tech Lead

Location: Ukraine, Kyiv

Key Areas of Expertise

- Software architecture, design, implementation and delivery
- AI-powered products and LLM assistants
- Crypto-trading platforms development and support

Technical skills

- TDD/BDD
- Backend: Java, Kotlin (Spring, Hibernate)
- Frontend: TypeScript (React)
- DB: PostgreSQL, MySQL, MongoDB, Redis
- Cloud: AWS
- CI/CD: GitLab CI/CD, GitHub Actions
- Docker, Terraform
- Microservices, Kafka, design patterns, SOLID
- AI: Spring AI, OpenAI API

Work experience

Software Engineer | Co-Founder — Aug 2025 – Present

Spilki

Spilki – AI Direct Manager for small businesses: an assistant that answers customers in Instagram, Telegram and a website widget 24/7, takes orders and books appointments directly in the business's CRM.
It learns from the business's price lists and brand guidelines, speaks the customer's language and tracks every conversation as a case with conversion analytics.

Kotlin, TypeScript, Terraform, AWS, Spring AI, OpenAI API
https://spilki.app

Software Engineer | Founder — Aug 2023 – Present

ColdWallet

Anonymous and free open-source financial dashboard running entirely on your device.
React + TypeScript application.
CWT token on Ethereum and BSC.
Front-end as a Service (FaaS): all code runs locally on your machine.
Your data is encrypted and never leaves your device.
Integrations with MetaMask, Binance, OKX, Monobank and top exchanges via CCXT.
Manual asset entry for any currency.
Ready-to-use MVP at: https://cold-wallet.app

Tech Lead
Jan 2020 – Jul 2025

Senior Java Developer
Nov 2018 – Jan 2020

Prof-IT Blockchain

Participated as a senior developer and tech lead in all dev cycles of blockchain-related cryptocurrencies trading platform (CEX with SPOT trading, matching engine, market-making, liquidity provider):

- Software architecture and design
- Software development (Java)
- Integration with existing system components (Kafka, REST, JSON-RPC over WS)
- Integration with third-party REST API
- Non-trivial blockchain listeners implementation
- Frontend and DevOps teams cooperation, support and review
- CI/CD creation and support

Full Stack Developer
Apr 2017 – Oct 2018

Junior Software Engineer
Oct 2015 – Apr 2017

Ubrainians

Full stack CMS development (open source: github.com/imCodePartnerAB/imcms).

- Participated in both client and server side development
- Redesigned old server side, DB schema and full-text search (Solr)
- Moved from Servlets to Spring MVC
- Added test frameworks and started doing TDD
- Designed and implemented asynchronous module loader (AMD) in pure JS
- Implemented new client almost from scratch using BEM, with a server-side presentation layer for it
- Added WYSIWYG text editor

Java, Spring (MVC, Data, AOP), Hibernate, Solr, MySQL, JUnit, Mockito, JS

Languages

- Ukrainian - native
- English - upper intermediate

Education

NTUU "KPI"

Automation Systems Engineer

Specialist's degree.

Additional Information

A passionate developer with a strong technical background and solid programming experience. I create services that work and build MVPs for fun.
